PROJECTS

Use GitHub Actions and Terraform to provision EC2 instance
DevOps Engineer

- Generate AWS Credentials for terraform user
- The next step will be to add credentials to Github as secrets
- Overview of the Terraform script to provision EC2 instance
- Terraform script to provision EC2 instance (app_server)
- Create a workflow with Github Actions to provision EC2 instance

AWS Cloud Infrastructure for OnlinePSBloans
AWS Cloud Architect

- Designed and tweaked global AWS infrastructure according to management's demand.
- Handling 100+ servers and more than 20+ services.
- Configure Trusted Domain SSL in Data Integration Platform.
- Deployed Enterprise level application and Software on servers as when required.
- Implemented AWS Lamda for SIT, QA & UAT servers for redusing cost & time of organization.

(Linux, Nginx Web server, AWS EC2, S3, RDS, Route 53, Cloud Front, VPC, ALB, Cloudwatch, SNS, IAM, CloudTrail, AWS SSO etc...)

AWS Cloud Infrastructure for thatlifestylecoach
AWS Cloud Architect

- Designed enterprise architecture on AWS cloud according to management's demand.
- Monitored existing infrastructure and architectural frameworks for performance, and made changes and updates when necessary.
- Migrated applications, accounts, and platforms when necessary and feasible.
- Strategized, designed, and deployed innovative and complete cloud data security architecture for company.

(Apache Server, MySQL, AWS EC2, S3, RDS, Route 53, Cloud Front, VPC, ALB, Cloudwatch, SNS, IAM, CloudTrail, AMI, AWS WAF)
